

CLIENT PRESENTATION / 2026

Tomorrow's aquaculture. Built today.

A reusable presentation system for SEARULEA's clients,
partners and institutions.

August 2026 · SEARULEA · Confidential

INVESTOR / TRADE / INSTITUTIONAL

From our sea to your port.

Use the dark cover when the presentation needs a more formal,
institutional opening.

Month Year · Presenter · Confidential

A flexible system, one visual language.

01

Start with the closest layout

Duplicate an example slide or choose its named layout from the New Slide menu.

02

Replace content, not the system

Keep the official logo, grid, type hierarchy and palette. Replace images, text and data in place.

03

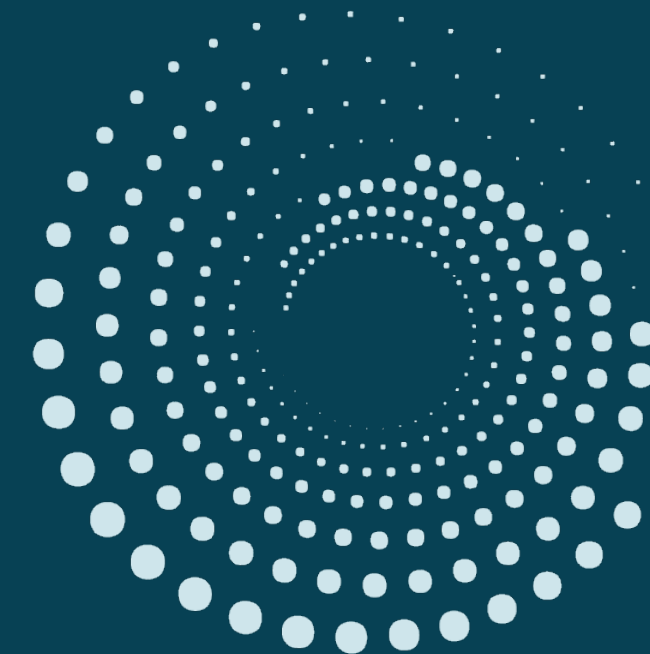

Keep every slide decisive

One Lora statement per slide. DM Sans carries the explanation, labels and numbers.

Today's conversation

01	Context	Why the opportunity matters now
02	Approach	How the integrated model works
03	Evidence	Milestones, capacity and operating proof
04	Decision	The partnership or action required

SECTION 01 / CONTEXT

Why now

The market context that makes this chapter necessary.

Ras El Ma can become the reference point for Mediterranean aquaculture.

An integrated, traceable and biosafe model turns natural advantage into durable production capacity.

SEARULEA builds the infrastructure behind Moroccan aquaculture.

SEARULEA operates an integrated value chain at Ras El Ma, Oriental Region.

Offshore farming, fresh conditioning at port, refrigerated export and traceability are designed to operate as one system—not as separate businesses.

The result is a platform built for international standards from day one, with local capability and documentation at every stage.

375 ha offshore concession · 2,790 t target capacity · 3 species

Integration creates control at every handoff.

One chain

Offshore production at Ras El Ma

Fresh conditioning at port

Cold chain and lot-level traceability

Export documentation through one operator

One standard

ONSSA requirements built into operations

European market documentation

Biosafety designed into the CAPEX

Clear ownership from cage to client

Evidence starts where the work happens.

Production at Ras El Ma

375-hectare government concession

Sea bream, seabass and meagre

Continuous monitoring and documented lots

Built to scale in defined phases

Control continues after the harvest.

Fresh, documented, ready to move

Fresh conditioning at port

Refrigerated logistics and export documentation

One point of contact for commercial partners

Traceability carried through the chain

PROOF / PARTNERSHIP

“One operator. One
documented chain.
One standard.”

Client or partner name · Role · Organisation

The scale is visible in four numbers.

375

HECTARES

Offshore government
concession

2,790

TONNES

Target annual capacity by 2031

40%

WOMEN

Workforce commitment

3

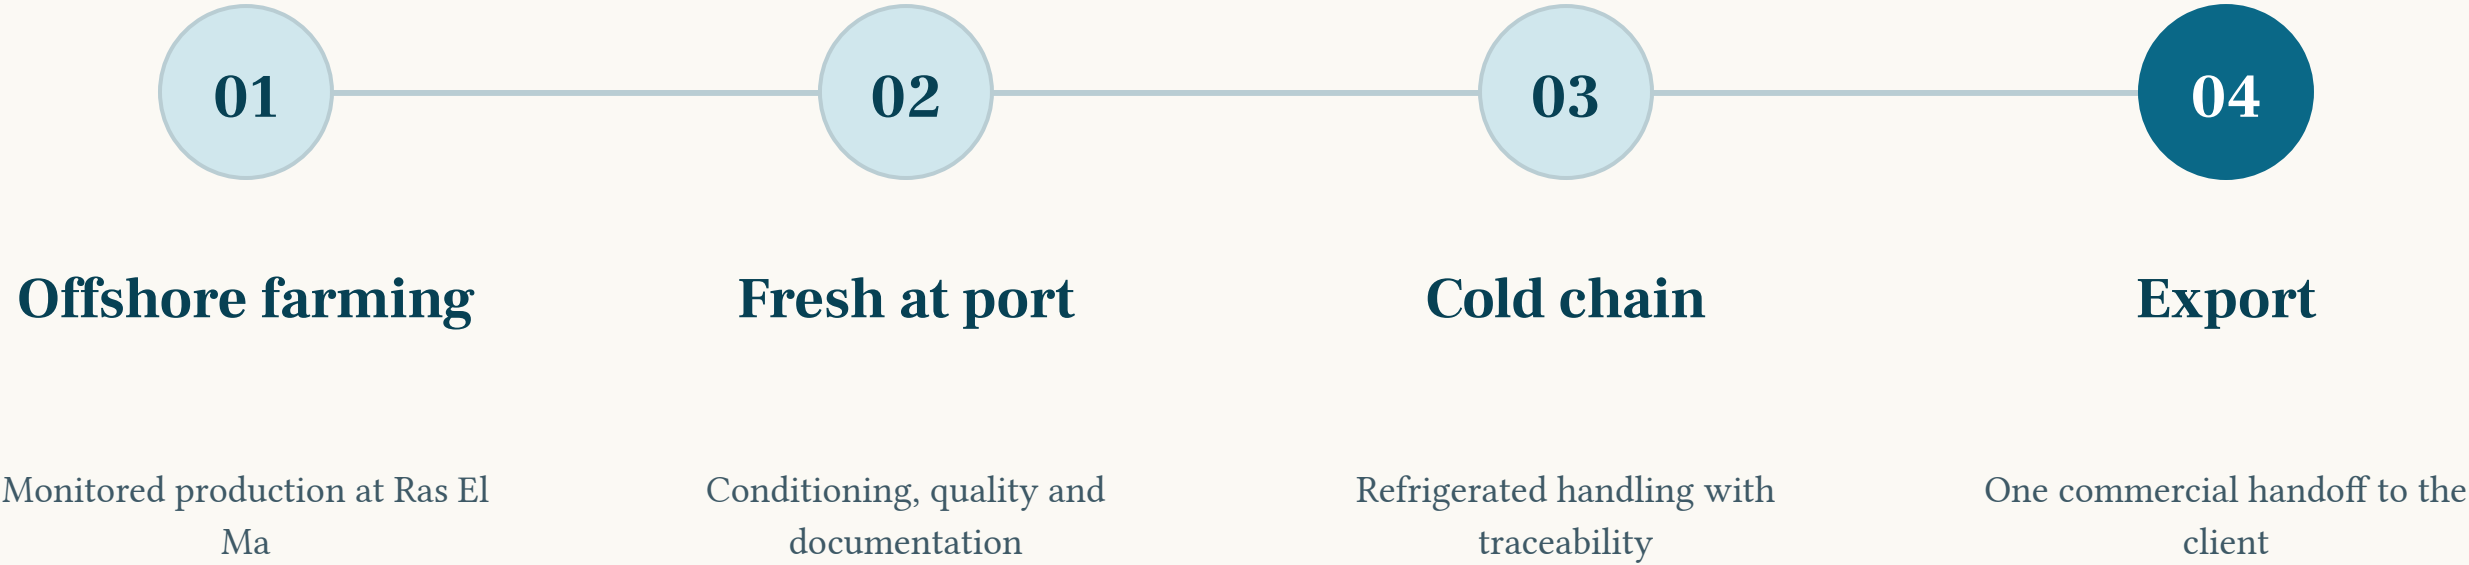

SPECIES

Sea bream, seabass and meagre

Use verified numbers and write the meaning directly below each one.

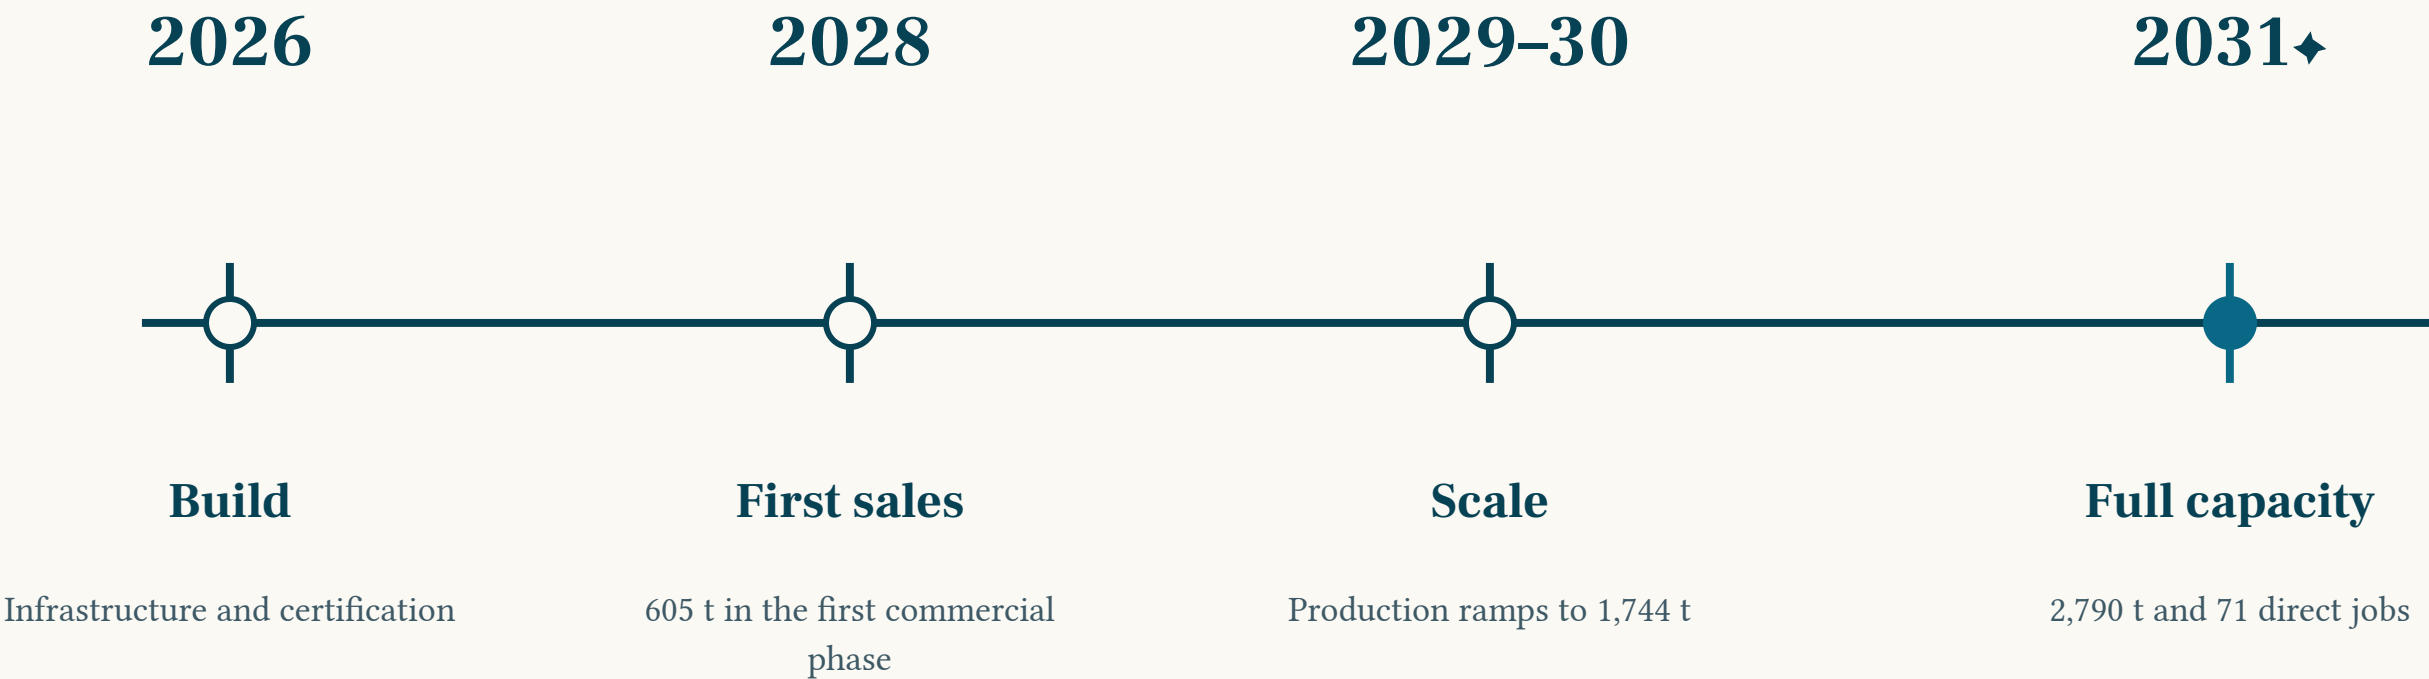

One chain, four controlled handoffs.

Our chain. Our commitments. Your certainty.

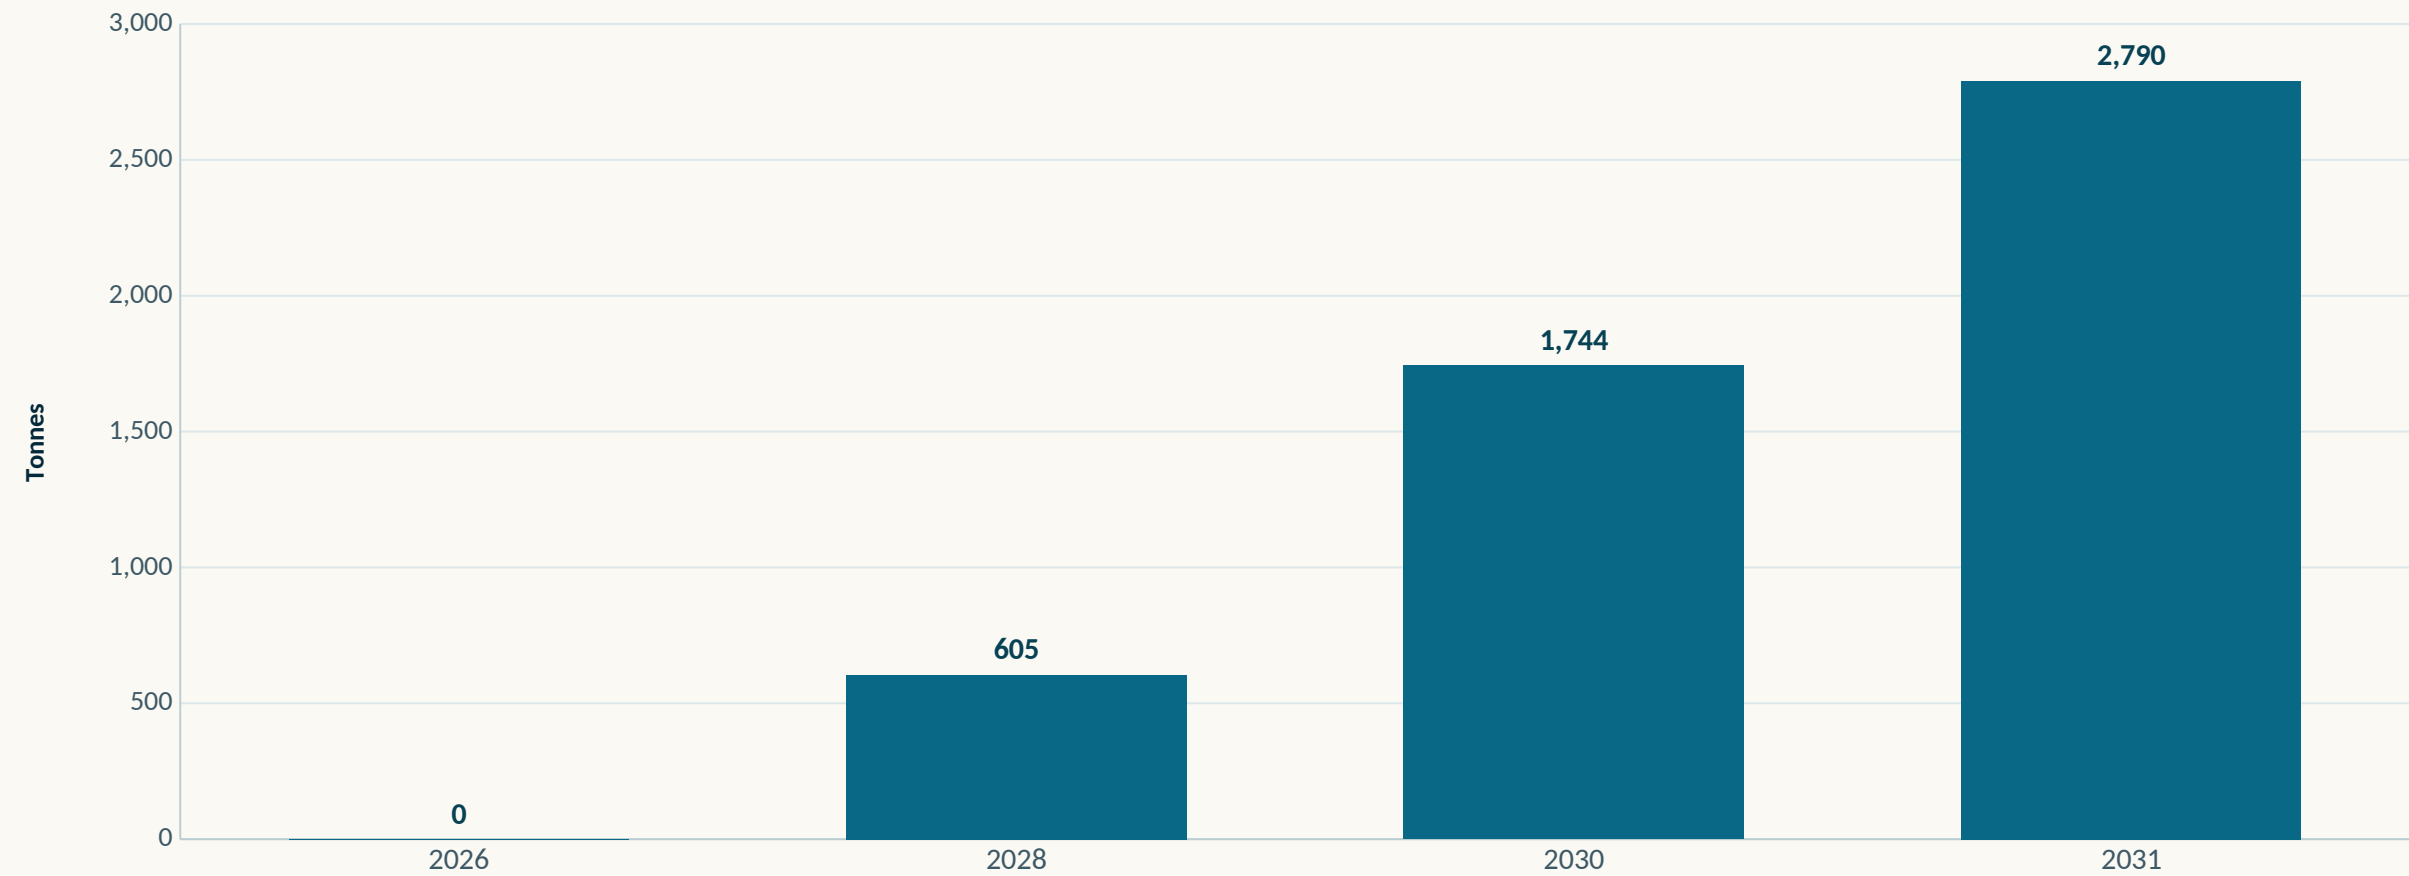

Capacity grows in documented phases.

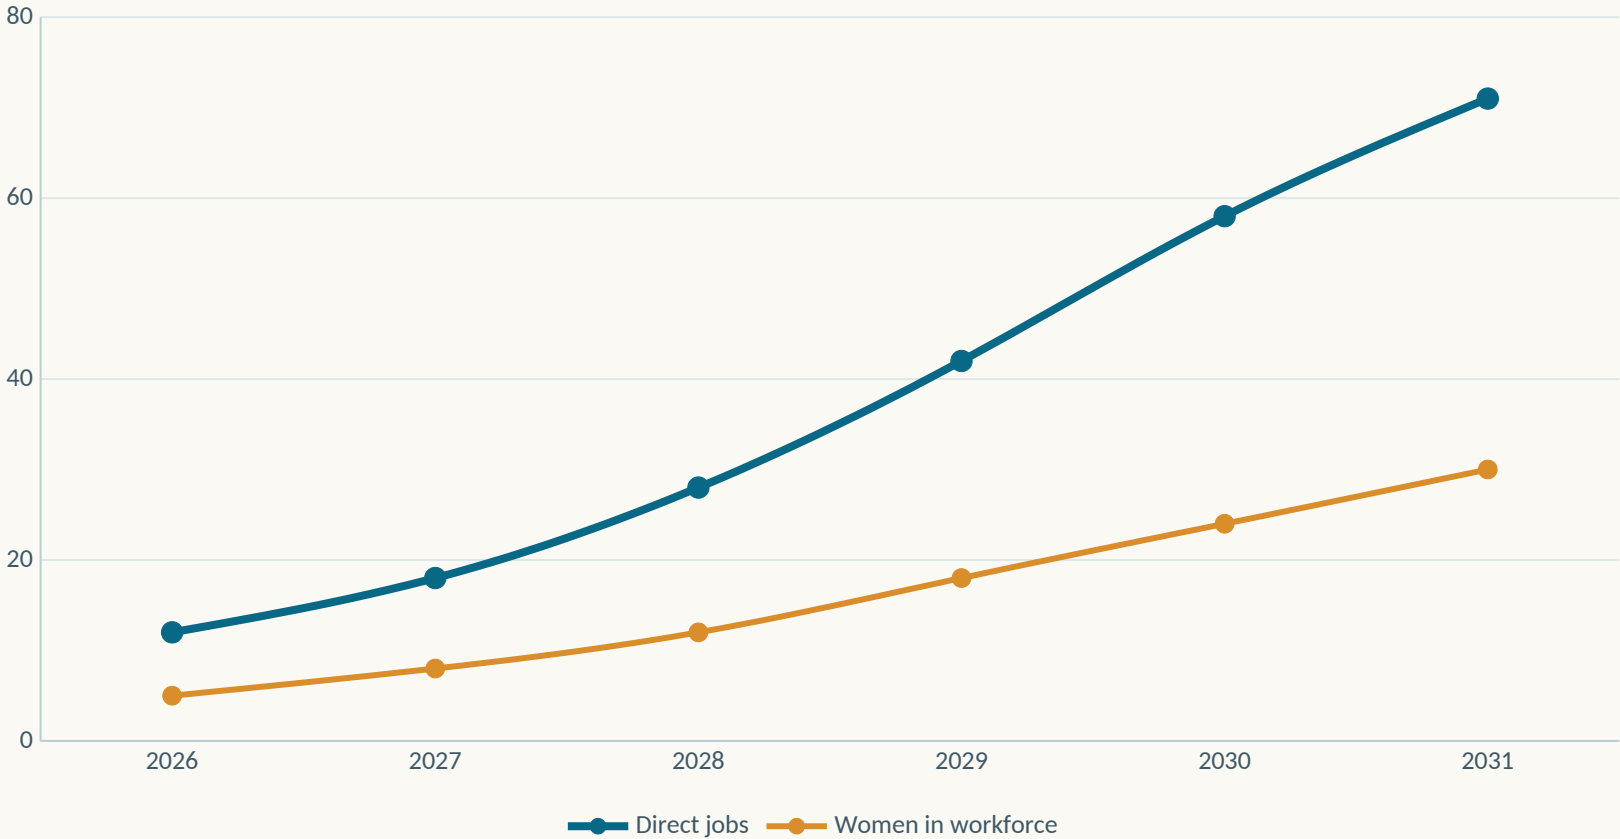

The operating plan reaches 2,790 tonnes by 2031.

Editable chart — right-click → Edit Data to replace the example series.

Employment grows with operating capacity.

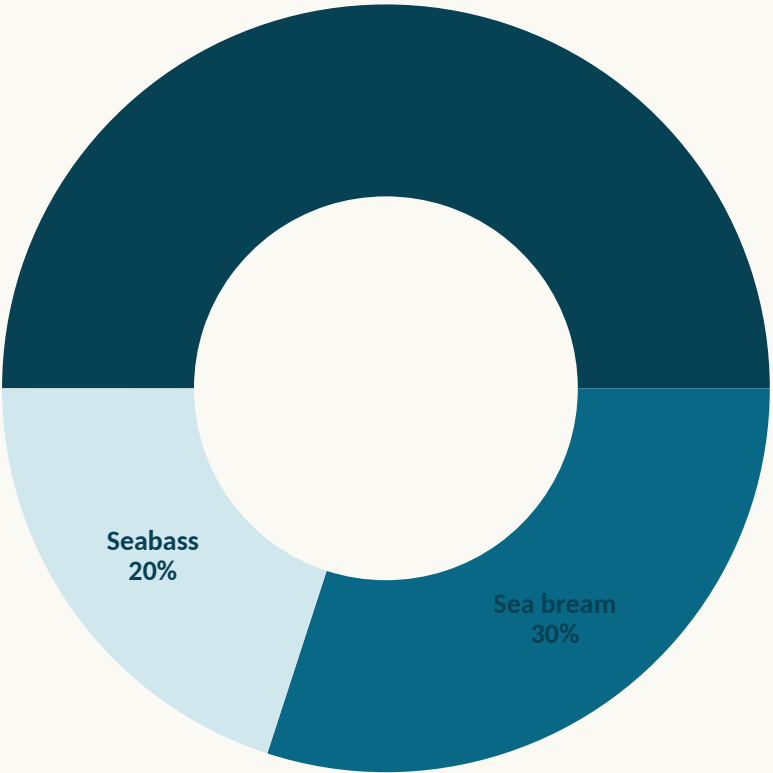

What the chart means
71 direct roles at full capacity
A minimum 40% commitment for women
Skills grow with each operating phase

Illustrative template data — replace with verified figures before presenting.

Three species balance demand and operating resilience.

■ Illustrative product mix

Use the headline to state the conclusion—not the chart type.

This layout works for portfolio mix, allocation, audience composition or any whole-to-part story with three to five categories.

Right-click → Edit Data to replace the example values.

Compare options against the criteria that matter.

OPTION A

Current approach

- Fragmented responsibility
- Multiple handoffs
- Variable documentation

OPTION B / RECOMMENDED

Integrated chain

- One accountable operator
- Controlled cold chain
- One documented standard

Make ownership and timing unambiguous.

Workstream	Owner	Timing	Outcome
Infrastructure	Operations	2026–27	Port and offshore readiness
Certification	Quality	2026–27	ONSSA and export documentation
Commercial launch	Trade	2028	First client deliveries
Scale-up	Executive team	2029–31	Full operating capacity

Editable table — keep to five or fewer rows on a standard slide.

The site connects natural advantage to export access.

Ras El Ma, Oriental Region

Direct Mediterranean access

375-hectare offshore concession

Port connection for fresh logistics

Proximity to European markets

Leadership rooted in execution.

Name Surname

TITLE / FUNCTION

Use a short biography focused on relevant experience, operating credibility and the person’s role in the decision at hand.

Add two or three proof points rather than a full career history.

Relevant experience

Specific responsibility

Decision or outcome owned

Show the system through evidence, not decoration.

Offshore operations

One sentence that explains what the image proves.

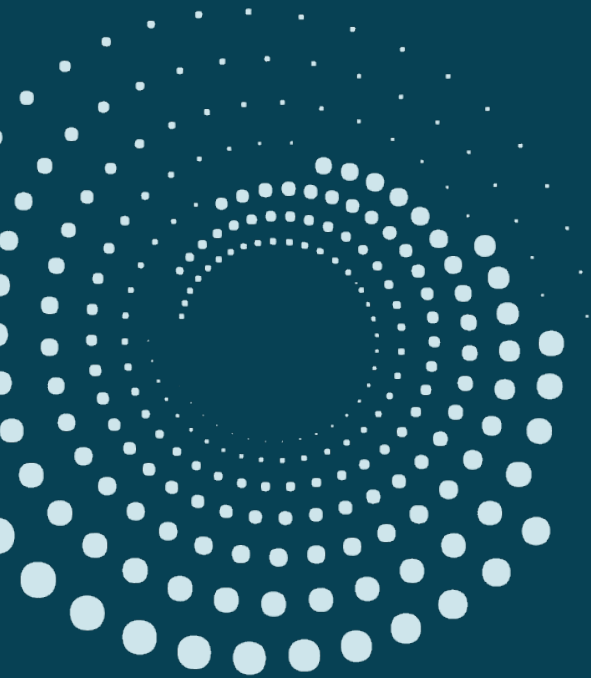

Traceability

One sentence that explains what the image proves.

Cold chain

One sentence that explains what the image proves.

SEARULEA

Let's build the next
chapter from Ras El
Ma.
